

Scenario:

You are a college student struggling to study. You would like to use this new app you were told about by a friend to help you study better.

Task 1: Create a set of 10 flashcards with different words on them and their definitions on the back

Task 2: Run through the flash cards and then save them to the projects section

Task 3: Browse through the created projects and rename the new one that you recently created to "Vocab Words"

Notes:

Needed a back button

Needs better UI

Needs a way to scroll through the flash cards out of order

The title page was good

The saved projects and new projects screens were good

The creating new projects button on the saved projects page was good
